

Outcomes and experiences S3 Physics	G	O	R	How do I know I can do this or what can you do to improve your learning in this outcome?
I can define potential difference as a measure of the energy given to charge carriers in a circuit				
I know that a charged particle will experience a force when in an electric field				
I can identify situations in which charged particles will, <ul style="list-style-type: none"> <li>• Attract each other</li> <li>• Repel each other</li> </ul>				
I can identify what will happen to a charged particle when placed in the following situations, <ul style="list-style-type: none"> <li>• Between two oppositely charged plates</li> <li>• Near a single point charge</li> <li>• Between two oppositely charged points</li> <li>• Between two like charged points</li> </ul>				
I can accurately sketch the field lines around a point charge
