

Outcomes and experiences S3 Physics	G	O	R	How do I know I can do this or what can you do to improve your learning in this outcome?
I know that a scalar quantity is fully defined by magnitude(size) only				
I know that a vector quantity is fully defined by magnitude(size) and direction				
I can classify the following quantities as being scalar or vector <i>force, speed, velocity, distance, displacement, acceleration, mass, time, energy</i>				
I can explain the difference between distance and displacement				
I can explain the difference between speed and velocity
